Based in	Business focus
Ho Chi Minh City, Vietnam	AI, digital transformation and management information systems

About UDT

UDT builds software for businesses and startups, connecting AI, digital workflows and business systems. We support the path from a concrete business problem to development, launch and ongoing improvement.

CAPABILITIES

From business needs to working systems

AI Solution Transformation

Assistants, search and summarization

Model integration and domain adaptation

AI features integrated into products, data and existing workflows. The work starts with a use case and a prototype before a full build.

Explore capability

Dedicated Development Team

Backend project experience: Node.js and LoopBack

Other project stacks: .NET, Python and Go

Engineers work within your tools, meetings and roadmap. You set priorities, and UDT supports team setup and continuity.

Explore capability

Web App & Mobile Development

Web: React.js and Next.js

Mobile: React Native

Data: MongoDB

Content sites: WordPress

Web and mobile products, from discovery and interface design to development, testing and improvement after launch.

Explore capability

DevOps & Cloud Services

Build, test and deployment pipelines

Infrastructure as code and operational monitoring

Project environments with AWS and Nginx

Cloud infrastructure and release automation, with monitoring and documentation that your team can maintain.

Explore capability

Ways to work together

Build a product or business system

Work with UDT on requirements, design, delivery and support. This can include back-office tools, dashboards and integrations between existing systems.

Extend an existing team

Add engineers who follow your priorities and review rules, with regular progress updates and work delivered in short iterations.

How we deliver

01	02	03	04
Understand	Design and validate	Build and integrate	Launch and improve
Clarify the business goal, users, current systems and scope.	Review user flows or test an AI prototype before the full build.	Develop in short iterations, with testing and regular progress reviews.	Support the release, monitor the system and plan further improvements.

Selected work

Manufacturing

HowFactory

A manufacturing workflow platform for digital work instructions, process collections, team messages and change notifications.

[View project](#) [Source](#)

Events

VDES

An events marketplace with a customer catalog, search, service comparison and an extranet for venues and suppliers. Project technologies: React.js, Node.js and MongoDB.

Technologies: React.js / Node.js / MongoDB [View project](#) [Source](#)

Legal services

LegalQ

Web and mobile software for attorney consultations, with booking, video, chat and an attorney dashboard.

Internal operations

UDT Platform (internal operations)

Our internal application supports project management, work-time records and leave requests. Technology: React.js, Node.js, LoopBack, MongoDB and Nginx. Developed for internal UDT operations.

Engagement: Internal UDT product ·

Technologies: React.js / Node.js / LoopBack / MongoDB / Nginx

Education technology

HomeRoom

Interface and API contributions to the HomeRoom project.

UDT contribution: UDT contributed interface implementation, responsive fixes, API work, and unit tests. · **Engagement:** Technical project contribution ·

Technologies: React / Node.js / MongoDB / LoopBack [Company website](#)

Orthopedic e-commerce

BraceAbility

Software maintenance and operational integrations for an orthopedic e-commerce business.

UDT contribution: UDT contributed API maintenance and operational tooling for orders, returns, shipping, and inventory, including Shopify-related tasks. · **Engagement:** Technical project contribution ·

Technologies: React / .NET / Python / AWS [Company website](#)

Packaging manufacturing

Kim Đức

Workflow and integration contributions for a packaging manufacturer.

UDT contribution: UDT contributed workflow automation, API integration, webhook tasks, and Docker-based deployment work. · **Engagement:** Technical project contribution ·

Technologies: Docker [Company website](#)

Container products and services

Cái Mép Containers

Interface and backend contributions for container-business operations.

UDT contribution: UDT contributed CRM and warehouse interfaces, inventory screens, and backend tasks. · **Engagement:** Technical project contribution ·

Technologies: React / Node.js / MongoDB [Company website](#)

Blockchain intelligence

Elementus

Targeted interface and backend contributions.

UDT contribution: UDT contributed page interfaces, search components, responsive layouts, and backend tasks. · **Engagement:** Technical project contribution ·

Technologies: React / Node.js / MongoDB / Next.js [Company website](#)

Start with the business problem
